BRIEF CONTENTS

PREFACE	xi
CHAPTER ONE	
An Overview of Computers and Logic	1
CHAPTER TWO	
Understanding Structure	35
CHAPTER THREE	
Modules, Hierarchy Charts, and Documentation	73
CHAPTER FOUR	
Writing and Designing a Complete Program	113
CHAPTER FIVE	
Making Decisions	149
CHAPTER SIX	
Looping	203
CHAPTER SEVEN	
Control Breaks	245
CHAPTER EIGHT	
Arrays	285
CHAPTER NINE	
Advanced Array Manipulation	329
CHAPTER TEN	
Using Menus and Validating Input	371
CHAPTER ELEVEN	
Sequential File Merging, Matching, and Updating	411
CHAPTER TWELVE	
Advanced Modularization Techniques	453
CHAPTER THIRTEEN	
Object-Oriented Programming	491
CHAPTER FOURTEEN	
Event-Driven Programming with Graphical User Interfaces	517
CHAPTER FIFTEEN	
System Modeling with UML	541
CHAPTER SIXTEEN	
Using Relational Databases	567
APPENDIX A	
Solving Difficult Structuring Problems	A-1
APPENDIX B	
Understanding Numbering Systems and Computer Codes	B-1
APPENDIX C	
Jsing a Large Decision Table	C-1
GLOSSARY	G-1
NDEX	1-1

TABLE OF CONTENTS

PREFACE	Xi
CHAPTER ONE	
An Overview of Computers and Logic	1
Understanding Computer Components and Operations	2
Understanding the Programming Process	5
Understand the Problem	6
Plan the Logic	6
Code the Program	7
Translate the Program into Machine Language	7
Test the Program	8
Put the Program into Production	9
Understanding the Data Hierarchy	10
Using Flowchart Symbols and Pseudocode Statements	12
Using and Naming Variables	16
Ending a Program by Using Sentinel Values	18
Using the Connector	20
A - i - i - Values to Variables	21
Understanding Data Types	22
Understanding the Evolution of Programming Techniques	24
Chapter Summary	26
Key Terms	26
Review Questions	29
Exercises	32
	32
CHAPTER TWO	
Understanding Structure	35
Understanding Unstructured Spaghetti Code	36
Understanding the Three Basic Structures	37
Using the Priming Read	44
Understanding the Reasons for Structure	50
Recognizing Structure	52
Two Special Structures—Case and Do Until	59
The Case Structure	59
The Do Until Loop	60
Chapter Summary	64
Key Terms	64
Review Questions	65
Exercises	68
CHAPTER THREE	00
lodules, Hierarchy Charts, and Documentation	73
Modules, Subroutines, Procedures, Functions, or Methods	74
Modularization Provides Abstraction	74
Modularization Allows Multiple Programmers to Work on a Problem	75
Modularization Allows You to Reuse Your Work	75
Modularization Makes it Easier to Identify Structures	76
Modularizing a Program	77
	THE RESIDENCE OF THE PARTY OF T

Modules Calling Other Modules	81
Declaring Variables	82
Creating Hierarchy Charts	84
Understanding Documentation	86
Output Documentation	87
Input Documentation	94
Completing the Documentation	99
Chapter Summary	101
Key Terms	101
Review Questions Exercises	103
	106
CHAPTER FOUR	
Writing and Designing a Complete Program	113
Understanding the Mainline Logical Flow Through a Program	114
Housekeeping Tasks	118
Declaring Variables	118
Opening Files	123
A One-Time-Only Task—Printing Headings	124
Reading the First Input Record	124
Writing the Main Loop	129
Performing End-Of-Job Tasks Understanding the Need for Cood Program Penian	132 134
Understanding the Need for Good Program Design	135
Storing Program Components in Separate Files Selecting Variable and Module Names	137
Designing Clear Module Statements	138
Avoiding Confusing Line Breaks	138
Using Temporary Variables to Clarify Long Statements	139
Using Constants Where Appropriate	139
Maintaining Good Programming Habits	140
Chapter Summary	141
Key Terms	141
Review Questions	142
Exercises	145
CHAPTER FIVE	149
Making Decisions Figure 1 and	150
Evaluating Boolean Expressions to Make Comparisons	152
Using the Logical Comparison Operators	
Understanding AND Logic	156 161
Writing Nested AND Decisions for Efficiency	
Combining Decisions in an AND Selection	163
Avoiding Common Errors in an AND Selection	164
Understanding OR Logic	166
Avoiding Common Errors in an OR Selection	167
Writing OR Decisions for Efficiency	170
Combining Decisions in an OR Selection	172
Using Selections within Ranges	174
Common Errors Using Range Checks	176
Understanding Precedence When Combining AND and OR Selections	178

Understanding the Case Structure	180
Using Decision Tables	182
Chapter Summary	190
Key Terms	191
Review Questions	192
Exercises	196
CHAPTER SIX	000
Looping	203
Understanding the Advantages of Looping	204
Using a While Loop with a Loop Control Variable	204
Using a Counter to Control Looping	207
Looping with a Variable Sentinel Value	211
Looping by Decrementing	213
Avoiding Common Loop Mistakes	214
Neglecting to Initialize the Loop Control Variable	214
Neglecting to Alter the Loop Control Variable	214
Using the Wrong Comparison with the Loop Control Variable	215
Including Statements Inside the Loop that Belong Outside the Loop	215
Initializing a Variable That Does Not Require Initialization	216
Using the For Loop	217
Using the Do Until Loop	219
Recognizing the Characteristics Shared by All Loops	223
Nesting Loops	224
Using a Loop to Accumulate Totals	230
Chapter Summary	233
Key Terms	233
Review Questions	234
Exercises	239
CHAPTER SEVEN	
Control Breaks	245
Understanding Control Break Logic	246
Performing a Single-Level Control Break to Start a New Page	246
Using Control Data within a Heading in a Control Break Module	252
Using Control Data within a Footer in a Control Break Module	254
Performing Control Breaks with Totals	256
Performing Multiple-Level Control Breaks Performing Page Breaks	261
Chapter Summary	267
Key Terms	273
Review Questions	274
Exercises	275
CHAPTER EIGHT	280
Arrays Understanding Arrays	285
How Arrays Occupy Computer Memory	286
Manipulating an Array to Replace Nested Decisions	286
Array Declaration and Initialization	287
Array Decidration and initialization	297

Run-Time and Compile-Time Arrays	299
Loading an Array from a File	302
Searching for an Exact Match in an Array	304
Using Parallel Arrays	306
Remaining within Array Bounds	310
Improving Search Efficiency Using an Early Exit	312
Searching an Array for a Range Match	314
Chapter Summary	318
Key Terms	318
Review Questions	319
Exercises	323
CHAPTER NINE	3 34 4 10 6
Advanced Array Manipulation	329
Understanding the Need for Sorting Records	330
Understanding How to Swap Two Values	331
Using a Bubble Sort	332
Refining the Bubble Sort by Using a Variable for the Array Size	339
Sorting a List of Variable Size	342
Refining the Bubble Sort by Reducing Unnecessary Comparisons	345
Refining the Bubble Sort by Eliminating Unnecessary Passes	347
Using an Insertion Sort	349
Using a Selection Sort	351
Using Indexed Files	353
Using Linked Lists	354
Using Multidimensional Arrays	356
Chapter Summary	362
Key Terms	362
Review Questions	363
Exercises	367
CHAPTER TEN	
Using Menus and Validating Input	371
Using Interactive Programs	372
Using a Single-Level Menu	373
Coding Modules as Black Boxes	377
Making Improvements to a Menu Program	382
Using the Case Structure to Manage a Menu	387
Using Multilevel Menus	390
Validating Input	397
Understanding Types of Data Validation	399
Validating a Data Type	399
Validating a Data Range	400
Validating Reasonableness and Consistency of Data	400
Validating Presence of Data	401
Chapter Summary	402
Key Terms	403
Review Questions	404
Exercises	407

viii

CHAPTER ELEVEN	144
Sequential File Marris Adatabing and Updauly	411
Understanding Cognential Data Files and the Need IVI Morging	412
Trooting the Mainline and houselyconing() Ollic III a IVIV 90	413
Creating the Mainline and housekeeping Logic for a Merge Program Creating the mainLoop() and finishUp() Modules for a Merge Program to Check for eof	416
Modifying the housekeeping() Module in the Merge Program to Check for eof	421
Master and Transaction File Processing	423
Matching Files to Undate Fields in Master File Records	424
Allowing Multiple Transactions for a Single Master File Record	430
Updating Records in Sequential Files	431
Chapter Summary	442
Key Terms	443
Review Questions	443
Exercises	447
CHAPTER TWELVE	453
Advanced Modularization Techniques	454
Understanding Local and Global Variables and Encapsulation	460
Passing a Single Value to a Module	466
Passing Multiple Values to a Module	469
Returning a Value from a Module	472
Using Prewritten, Built-in Modules	474
Using an IPO Chart	475
Understanding the Advantages of Encapsulation	476
Reducing Coupling and Increasing Cohesion	477
Reducing Coupling	479
Increasing Cohesion	482
Chapter Summary	482
Key Terms	484
Review Questions	487
Exercises	101
CHAPTER THIRTEEN	404
Object-Oriented Programming	491
An Overview of Object-Oriented Programming	492
Defining Classes	493
Instantiating and Using Objects	497
Understanding Inheritance	498
Understanding Polymorphism	501
Understanding Constructor and Destructor Methods	504
Using Predefined Classes to Create GUI Objects	507
The Advantages of Object-Oriented Programming	500
Chapter Summary	50
Key Terms	50
Review Questions	51
Evaraises	51

CHAPTER FOURTEEN	1
Event-Driven Programn	r

Event-Driven Programming with Graphical User Interfaces	517
Origer Stationing Event-Driven Programming	518
User-Initiated Actions and GUI Components	519
Designing Graphical User Interfaces	521
The Interface Should Be Natural and Predictable	521
The Screen Design Should Be Attractive and User-Friendly	522
It's Helpful If the User Can Customize Your Applications	522
The Program Should Be Forgiving	523
The GUI Is Only a Means to an End	523
Modifying the Attributes of GUI Components	523
The Steps to Developing an Event-Driven Application	524
Understanding the Problem	524
Creating Storyboards	525
Defining the Objects in an Object Dictionary	525
Defining the Connections Between the User Screens	526
Planning the Logic	527
Object-Oriented Error Handling: Throwing Exceptions	528
Chapter Summary	534
Key Terms	534
Review Questions	535
Exercises	538
CHAPTER FIFTEEN	000
System Modeling with UML	F 44
Understanding the Need for System Modeling	541
What is UML?	542
Using Use Case Diagrams	542
Using Class and Object Diagrams	544
Using Sequence and Collaboration Diagrams	549
Using Statechart Diagrams	553
	555
Using Activity Diagrams	556
Using Component and Deployment Diagrams	557
Deciding Which UML Diagrams to Use	559
Chapter Summary	560
Key Terms	561
Review Questions	562
Exercises	565
CHAPTER SIXTEEN	
Ising Relational Databases	567
Understanding Relational Database Fundamentals	568
Creating Databases and Table Descriptions	570
Identifying Primary Keys	571
Understanding Database Structure Notation	573
Adding, Deleting, and Updating Records within Tables	573
0, 0, 1	3/3

Sorting the Records in a Table	57
Creating Queries	57
Understanding Table Relationships	57
Understanding One-to-Many Relationships	57
Understanding Many-to-Many Relationships	57
Understanding One-to-One Relationships	58
Recognizing Poor Table Design	582
Understanding Anomalies, Normal Forms, and the Normalization Process	584
First Normal Form	588
Second Normal Form	586
Third Normal Form	588
Database Performance and Security Issues	591
Providing Data Integrity	591
Recovering Lost Data	591
Avoiding Concurrent Update Problems	592
Providing Authentication and Permissions	592
Providing Encryption	592
Chapter Summary	593
Key Terms	594
Review Questions	596
Exercises	600
APPENDIX A	A-1
Solving Difficult Structuring Problems	
APPENDIX B	D 4
Understanding Numbering Systems and Computer Codes	B-1
APPENDIX C	C-1
Using a Large Decision Table	
GLOSSARY	G-1
INDEX	
	1-1
