Subscribe to our online digital library for full access to over 7,000 books and videos, as well as industry leading tools to help you plan your personal development and advance your career. For more information, please visit our website.

Why subscribe?

- Spend less time learning and more time coding with practical eBooks and Videos from over 4,000 industry professionals
- Improve your learning with Skill Plans built especially for you
- · Get a free eBook or video every month
- · Fully searchable for easy access to vital information
- · Copy and paste, print, and bookmark content

Did you know that Packt offers eBook versions of every book published, with PDF and ePub files available? You can upgrade to the eBook version at www.packt.com and as a print book customer, you are entitled to a discount on the eBook copy. Get in touch with us at customercare@packtpub.com for more details.

At www.packt.com, you can also read a collection of free technical articles, sign up for a range of free newsletters, and receive exclusive discounts and offers on Packt books and eBooks.

Contributors

About the author

Gary Smart is a senior software engineer and an IoT and integration expert. The commencement of Gary's IT career coincided with the birth of the World Wide Web and has grown in line with the internet and emerging technologies ever since, including the rise of mobile phones and tablets, embedded technologies, SaaS and business migration to the cloud, and in recent years, the IoT revolution. Gary's practical experience includes both technical and management positions and experience in both small and large organizations, including Hewlett-Packard, Deakin University, and Pacific Hydro-Tango, boutique consulting firms, and innovative internet and IoT start-ups.

A big and loving thanks to my wife, Kylie. Without your encouragement and support, this book and the opportunity to share my passion and knowledge with others would not have happened. And a big thanks also to my friends and colleagues who along the journey have likewise provided encouragement and expressed sincere interest in the material I was producing. You've all helped me understand that I have something valuable to share! Thank you!

About the reviewer

Federico Gonzalez is an Argentinian-based cooperative developer and teacher. He studies information systems engineering at UTN with a focus on development. He is part of Devecoop, a cooperative where he works on projects using a broad range of technologies, currently focusing on developing software and teaching React.js. He contributes to open source projects such as Lelylan (an IoT cloud platform with microservices architecture), EventoL (conference and installfest management software), and some minor contributions to projects with a Docker environment, Python, or JavaScript code. He also gives various workshops at universities, conferences, and companies in Argentina featuring React.js, Python, Docker, open source free software, and cooperatives.

Devecoop is my company. It lets me work on many interesting projects and sponsors me to go to conferences and give workshops and talks, and also helps me grow my teaching skills. I've learned a lot from the people that contribute to free software communities (USLA, GNUTN, CAFELUG, and more) and I'm a contributor too.

Packt is searching for authors like you

If you're interested in becoming an author for Packt, please visit authors.packtpub.com and apply today. We have worked with thousands of developers and tech professionals, just like you, to help them share their insight with the global tech community. You can make a general application, apply for a specific hot topic that we are recruiting an author for, or submit your own idea.

Table of Contents

Preface particularly was beautiful promoted and analysis and	1
Section 1: Programming with Python and the Raspberry	100
Chapter 1: Setting Up your Development Environment	15
Technical requirements	16
Understanding your Python installation	16
Setting up a Python virtual environment	18
Installing Python GPIO packages with pip	21
Anatomy of a virtual environment	26
Alternative methods of executing a Python script	29
Using sudo within virtual environments	29
Executing Python scripts outside of their virtual environments	30
Running a Python script at boot	31
Configuring the GPIO interface on our Raspberry Pi	33
Configuring the PiGPIO daemon	35
Summary	36
Further reading	37
hapter 2: Getting Started with Python and IoT	39
Tackwisel very ive weeks	40
Constitute a broadle and protections singuit	44
Understanding the breadboard	42
Positioning and connecting the push button	44
Positioning and connecting the LED	47
Positioning and connecting the resistor	49
Reading an electronic schematic diagram	51
Reading the push button schematic connection	52
Reading the LED and resistor schematic connection	54
Introducing ground connections and symbols	56
Exploring two ways to flash an LED in Python	58
Blinking with GPIOZero	58
Imports	59
Pin Factory configuration	60
Billiking the LED	60
Blinking with PiGPIO	
Imports PiGPIO and pin configuration	61
	61
Blinking the LED	62

	Comparing the GPIOZero and PiGPIO examples	62
	Exploring two ways to integrate a push button in Python	63
	Responding to a button press with GPIOZero	63
	Imports	64
	Button pressed handler	64
	Button configuration	65
	Preventing the main thread from terminating	66
	Responding to a button press with PiGPIO	66 67
	Button pin configuration Button pressed handler	67
		69
	Creating your first IoT program	70
	Running and testing the Python server	70
	Understanding the server code Imports	Unu 71
	Variable definitions	71
	The resolve_thing_name() method	72
	The get_lastest_dweet() method	72
	The poll_dweets_forever() method	74
	The process_dweet() method	74
	The main program entry point	75
	Extending your IoT program	76
	Implementing a dweeting button	76
	PiGPIO LED as a class	77
