Vehicle noise and vibration refinement

Related titles:

Advanced direct injection combustion engine technologies and development Volume 1: Gasoline and gas engines
(ISBN 978-1-84569-389-3)

Direct injection (DI) enables precise control of the fuel/air mixture so that engines can be tuned for improved power and fuel economy, but ongoing research challenges remain in improving the technology for commercial applications. As fuel prices escalate, DI engines are expected to gain in popularity for automotive applications. This important book, in two volumes, reviews the science and technology of different types of DI combustion engines and their fuels. Volume 1 deals with direct injection gasoline and CNG engines, including history and essential principles, approaches to improved fuel economy, design, optimisation, optical techniques and their application.

Advanced direct injection combustion engine technologies and development Volume 2: Diesel engines
(ISBN 978-1-84569-744-0)

Direct injection (DI) enables precise control of the fuel/air mixture so that engines can be tuned for improved power and fuel economy, but ongoing research challenges remain in improving the technology for commercial applications. As fuel prices escalate DI engines are expected to gain in popularity for automotive applications. This important book, in two volumes, reviews the science and technology of different types of DI combustion engines and their fuels. Volume 2 investigates diesel DI combustion engines, which despite their commercial success are facing ever more stringent emissions legislation worldwide. Three main sections address light-duty diesel engines; heavy-duty diesel engines; and the all-important exhaust emission control strategies, including combustion diagnostics and modelling.

Tribology and dynamics of engine and powertrain: Fundamentals, applications and future trends
(ISBN 978-1-84569-361-9)

Tribology is one element of many interacting within a vehicle engine and powertrain. In adopting a detailed, theoretical, component approach to solving tribological problems, the minutiae can be overwhelmingly complex and practical solutions become elusive and uneconomic. The system perspective generally adopted in industry, however, can lead to shortcuts and oversimplifications, industrial projects are subject to *ad hoc* trial and error, and subsequent 'fire-fighting' activity is required. This book seeks to bridge this divide, using a multi-physics approach to provide sufficient fundamental grounding and understanding of both detailed and approximate analyses – thereby making 'first time right' design solutions possible. Tribological issues and solutions in piston systems, valve train systems, engine bearings and drivetrain systems are addressed. New developments in materials, micro-engineering, nano-technology and MEMS are also included.

The publishers' policy is to use permanent paper from mills that operate a sustainable forestry policy, and which has been manufactured from pulp which is processed using acid-free and elemental chlorine-free practices. Furthermore, the publishers ensure that the text paper and cover board used have met acceptable environmental accreditation standards.

Contents

	<i>Contributor contact details</i>	xi
	<i>Preface</i>	xiii
Part I	Introduction	1
1	Rationale and history of vehicle noise and vibration refinement X. WANG, RMIT University, Australia	3
1.1	Introduction	3
1.2	Objectives and significance of vehicle noise and vibration refinement	4
1.3	Scope of vehicle noise and vibration refinement	4
1.4	The vehicle development process and vehicle noise and vibration refinement	5
1.5	Vehicle noise and vibration term definitions	14
1.6	History of motoring and vehicle refinement	14
1.7	References and bibliography	17
2	Target setting and benchmarking for vehicle noise and vibration refinement X. WANG, RMIT University, Australia	18
2.1	Introduction	18
2.2	Benchmarking of vehicle noise and vibration	21
2.3	Target setting for vehicle noise and vibration	21

Part II	Measurement and modelling	31
3	Vehicle vibration measurement and analysis X. WANG, RMIT University, Australia	33
3.1	Introduction	33
3.2	Hand sensing	33
3.3	Basic vibration measurements	36
3.4	Vibration response investigation and vibration testing	45
3.5	Environmental testing	48
3.6	Mounting the test object	48
3.7	Measuring the complex elastic modulus	50
3.8	Quoting vibration levels	52
3.9	Vibration isolation	57
3.10	The vibration absorber	61
3.11	Case studies	63
3.12	Bibliography	67
4	Vehicle noise measurement and analysis X. WANG, RMIT University, Australia	68
4.1	Introduction	68
4.2	Sound fundamentals	68
4.3	Vehicle noise	78
4.4	Measuring microphones	80
4.5	Measuring amplifiers	84
4.6	Calibration	84
4.7	Background noise	85
4.8	Recording sound	85
4.9	Analysis and presentation of noise data	86
4.10	Artificial head technology and psychoacoustics	90
4.11	Bibliography	92
5	Random signal processing and spectrum analysis in vehicle noise and vibration refinement X. WANG, RMIT University, Australia	93
5.1	Random data and process	93
5.2	Correlation analysis	100
5.3	Fourier series	102
5.4	Spectral density analysis	106
5.5	Relationship between correlation functions and spectral density functions	109

5.7	Weighting functions	111
5.8	Relationship between complex frequency response and impulsive response	114
5.9	Frequency response functions	115
5.10	Bibliography	116
6	Theory and application of modal analysis in vehicle noise and vibration refinement M. KRONAST, Ford-Werke GmbH, Germany	117
6.1	Introduction	117
6.2	Application of modal analysis in vehicle development	118
6.3	Theory of modal analysis	122
6.4	Methods for performing modal analysis	128
6.5	Limitations and trends	139
6.6	References	140
7	Mid- and high-frequency problems in vehicle noise and vibration refinement – statistical energy analysis and wave approaches X. WANG, RMIT University, Australia	142
7.1	Introduction	142
7.2	Modal approach	145
7.3	Energy sharing between two oscillators	149
7.4	Energy exchange in multi-degree-of-freedom systems	153
7.5	Wave approach to statistical energy analysis (SEA)	159
7.6	Procedures of the statistical energy analysis approach	162
7.7	Evaluation of the statistical energy analysis subsystem parameters	163
7.8	Hybrid deterministic and the statistical energy analysis approach	170
7.9	Application example	171
7.10	References	172
8	Advanced simulation techniques in vehicle noise and vibration refinement N. HAMPL, Ford-Werke GmbH, Germany	174
8.1	Introduction	174
8.2	Basic simulation techniques	175
8.3	Frequency or time-domain methods	181

viii	Contents	
8.5	Application of virtual reality for vehicle noise and vibration refinement	185
8.6	Conclusions	186
8.7	Sources of further information and advice	187
8.8	References	187
9	Advanced experimental techniques in vehicle noise and vibration refinement T. AHLERSMEYER, Ford-Werke GmbH, Germany	189
9.1	Transfer path analysis technique	189
9.2	Sound intensity technique for source identification	192
9.3	Acoustic camera: beamforming and nearfield acoustic holography techniques for source diagnostics	196
9.4	Laser techniques for dynamic analysis and source identification	199
9.5	Sound quality and psychoacoustics: measurement and analysis	201
9.6	Ultrasound diagnostic techniques	206
