Title: [Liberalization in the process of economic development](#) Public
Author: Krause, Lawrence B.
Published: University of California Press, 1991
Subjects: [Economics and Business](#)
Publisher's Description: Economic growth in all developing countries is guided, and often accelerated, by generally intrusive policies implemented by governments intent on playing an active role in furthering development. As economies have grown and become more complex, however, even small market distortions are magnified, . . . [\[more\]](#)

Introduction

Lawrence B. Krause

The story of development is one that mixes economics and politics. Economic development so profoundly changes a society that political change must be involved on both sides of the equation—that is, as a cause of economic development and also as a result of it. Many economists and other social scientists thus view economic development as part of a process of overall modernization; some, however, argue that growth initiated and controlled from abroad does not lead to the modernization of a society. Such a case could exist in theory; in reality, however, whenever a country has managed to raise per capita income for an extended period of time, significant societal change has taken place.

No matter how abruptly change may occur, the evolution of a society reflects its previous history. Thus the story of development is different in every country. There are similarities among countries (the science of development is aimed at discerning these similarities), but unique elements always mark the development experience in a given country.

The story of development is also one of a swinging pendulum. Pressures force public policy in one direction to a point of exaggeration, followed by a reaction in the opposite direction. Upon achieving political independence, most developing countries found Adam Smith's invisible hand wanting and the lure of free markets not very appealing. Laissezfaire did not satisfy the desire of Third World governments to be active and do something to speed development.

In the early literature of economic development, economists viewed the state as a solitary, benevolent actor behaving solely in the societal interest. The state was seen as being able to obtain needed information and then, with that knowledge and the policy instruments available
