This publication is designed to provide accurate and authoritative information with regard to the subject matter covered. It is sold with the understanding that the publisher is not engaged in rendering legal, accounting, or other professional advice. If legal advice or other expert assistance is required, the services of a competent professional personal should be sought.

"Hypothetical or simulated performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not been executed, the results may be under or over compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account is likely to achieve profits or losses similar to those shown."

The patterns, trading methods and systems shown in this book, including all of the patterns listed in section four are for educational purposes only. Past results are not necessarily indicative of future results and, therefore, it should not be assumed that use of the rules or techniques presented will result in real trading profits. This is not a solicitation of any order to buy or sell. Stock and Futures trading involves substantial risks.

1975~2000

Preface

Investing in stocks has entered a whole new domain in the late 1990's. The emergence of online brokerages coupled with the abundance of fundamental and technical information on every available stock issue has compelled hundreds of thousands of individuals from around the globe to seek their fortunes in the gold mines of the global stock markets. Going into this new millennium, the number of stock market investors and traders will increase dramatically as new tools become available that make it easier to access and process market information. Many have already quit their jobs and become full time traders, spending long hours in front of their personal computer screen and trying to profit from the volatile moves of stock prices. But, as easy as this may sound to the novice, making money trading stocks, or anything with a price tag on it for that purpose, is a very difficult task that requires more than the will or the wish to succeed!

Writing a book on a subject like this is a very challenging task, as there is plenty of good literature available by many distinguished authors. I intend to take upon this challenge, however, and provide the reader with new and valuable information, a result of my many years of research and development effort in this area.

Michael Harris
