UNIX and Linux system administration handbook / Evi Nemeth ... [et al.].
—4th ed.
p. cm.
Rev. ed of: Unix system administration handbook, 3rd ed., 2001.
Includes index.
ISBN 978-0-13-148005-6 (pbk. : alk. paper)
1. Operating systems (Computers) 2. UNIX (Computer file) 3. Linux.
I. Nemeth, Evi. II. Unix system administration handbook.
QA76.76.O63N45 2010

# *Table of Contents*

**FOREWORD**

**PREFACE**

**ACKNOWLEDGMENTS**

**SECTION ONE: BASIC ADMINISTRATION**

**CHAPTER 1 WHERE TO START**

Essential duties of the system administrator . . . . . .
Account provisioning. . . . . .
Adding and removing hardware. . . . . .
Performing backups . . . . . .
Installing and upgrading software . . . . . .
Monitoring the system . . . . . .
Troubleshooting . . . . . .
Maintaining local documentation

System-specific administration tools
Notation and typographical conventions
Units
Man pages and other on-line documentation
Organization of the man pages
**man**: read man pages
Storage of man pages
GNU Texinfo
Other authoritative documentation
System-specific guides
Package-specific documentation
Books
RFCs and other Internet documents
The Linux Documentation Project
Other sources of information
Ways to find and install software
Determining whether software has already been installed
Adding new software
Building software from source code
System administration under duress
Recommended reading
System administration
Essential tools
Exercises

## CHAPTER 2 SCRIPTING AND THE SHELL

Shell basics
Command editing
Pipes and redirection
Variables and quoting
Common filter commands
**cut**: separate lines into fields
**sort**: sort lines
**uniq**: print unique lines
**wc**: count lines, words, and characters

**bash** scripting
- From commands to scripts
- Input and output
- Command-line arguments and functions
- Variable scope
- Control flow
- Loops
- Arrays and arithmetic

Regular expressions
- The matching process
- Literal characters
- Special characters
- Example regular expressions
- Captures
- Greediness, laziness, and catastrophic backtracking

Perl programming
- Variables and arrays
- Array and string literals
- Function calls
- Type conversions in expressions
- String expansions and disambiguation of variable reference
- Hashes
- References and autovivification
- Regular expressions in Perl
- Input and output
- Control flow
- Accepting and validating input
- Perl as a filter
- Add-on modules for Perl

Python scripting
- Python quick start
- Objects, strings, numbers, lists, dictionaries, tuples, and file
- Input validation example
- Loops

Scripting best practices

## CHAPTER 3 BOOTING AND SHUTTING DOWN

Bootstrapping
- Recovery boot to a shell
- Steps in the boot process
- Kernel initialization
- Hardware configuration
- Creation of kernel processes
- Operator intervention (recovery mode only)
- Execution of startup scripts
- Boot process completion

Booting PCs
GRUB: The GRand Unified Boot loader
- Kernel options
- Multibooting

Booting to single-user mode
- Single-user mode with GRUB
- Single-user mode on SPARC
- HP-UX single-user mode
- AIX single-user mode

Working with startup scripts
- **init** and its run levels
- Overview of startup scripts
- Red Hat startup scripts
- SUSE startup scripts
- Ubuntu startup scripts and the Upstart daemon
- HP-UX startup scripts
- AIX startup

Booting Solaris
- The Solaris Service Management Facility
- A brave new world: booting with SMF

Rebooting and shutting down
- **shutdown**: the genteel way to halt the system
- **halt** and **reboot**: simpler ways to shut down

Exercises

Modern access control
Role-based access control
SELinux: security-enhanced Linux.
POSIX capabilities (Linux)
PAM: Pluggable Authentication Modules
Kerberos: third-party cryptographic authentication
Access control lists
Real-world access control
Choosing a root password
Logging in to the root account
**su**: substitute user identity.
**sudo**: limited **su**.
Password vaults and password escrow
Pseudo-users other than root
Exercises

**CHAPTER 5 CONTROLLING PROCESSES**

Components of a process.
PID: process ID number
PPID: parent PID
UID and EUID: real and effective user ID
GID and EGID: real and effective group ID
Niceness
Control terminal
The life cycle of a process
Signals.
**kill**: send signals
Process states
**nice** and **renice**: influence scheduling priority.
**ps**: monitor processes.
Dynamic monitoring with **top**, **prstat**, and **topas**
The /**proc** filesystem.
**strace**, **truss**, and **tusc**: trace signals and system calls
Runaway processes
Recommended reading

Recommended reading
Exercises

## CHAPTER 6 THE FILESYSTEM

Pathnames
    Absolute and relative paths
    Spaces in filenames
Filesystem mounting and unmounting
The organization of the file tree
