Contents

Preface.....	xvii
The authors	xix
Chapter 1 Power system automation	1
1.1 Introduction.....	1
1.2 Evolution of automation systems	2
1.2.1 History of automation systems.....	3
1.3 Supervisory control and data acquisition (SCADA) systems	4
1.3.1 Components of SCADA systems	5
1.3.2 SCADA applications.....	6
1.4 SCADA in power systems	7
1.4.1 SCADA basic functions.....	7
1.4.2 SCADA application functions.....	7
1.4.2.1 Generation SCADA application functions	8
1.4.2.2 Transmission SCADA application functions	9
1.4.2.3 Distribution automation application functions....	9
1.5 Advantages of SCADA in power systems.....	10
1.5.1 Deferred capital expenditure.....	10
1.5.2 Optimized operation and maintenance costs	11
1.5.3 Equipment condition monitoring (ECM).....	11
1.5.4 Sequence of events (SOE) recording	11
1.5.5 Power quality improvement.....	11
1.5.6 Data warehousing for power utilities.....	12
1.6 Power system field	12
1.6.1 Transmission and distribution systems	12
1.6.2 Customer premises.....	14
1.6.3 Types of data and signals in power system	14
1.6.3.1 Analog signals.....	14
1.6.3.2 Data acquisition systems	15
1.6.3.3 Digital signals.....	16
1.6.3.4 Pulse signals	17

1.7	Flow of data from the field to the SCADA control center.....	17
1.8	Organization of the book.....	18
1.9	Summary	19
	Bibliography.....	19
Chapter 2 SCADA fundamentals.....		21
2.1	Introduction.....	21
2.2	Open system: Need and advantages.....	21
2.3	Building blocks of SCADA systems.....	22
2.4	Remote terminal unit (RTU)	24
2.4.1	Evolution of RTUs.....	24
2.4.2	Components of RTU	25
2.4.3	Communication subsystem.....	26
2.4.3.1	Communication protocols	27
2.4.3.2	Message security.....	27
2.4.3.3	Multi-port communication	27
2.4.4	Logic subsystem.....	27
2.4.4.1	Time keeping.....	28
2.4.4.2	Data acquisition and processing.....	28
2.4.4.3	Digital data acquisition	28
2.4.4.4	Analog data acquisition	29
2.4.4.5	Analog outputs.....	29
2.4.4.6	Digital (contact) output	29
2.4.4.7	Pulse inputs	30
2.4.4.8	Pulse outputs.....	30
2.4.5	Termination subsystem.....	30
2.4.5.1	Digital terminations	31
2.4.5.2	Analog terminations	31
2.4.6	Testing and human-machine interface (HMI) subsystem ...	31
2.4.7	Power supplies	32
2.4.8	Advanced RTU functionalities	32
2.4.8.1	Multi-port and multi-protocol operation.....	33
2.4.8.2	Digital interface to other electronic devices.....	33
2.4.8.3	Closed-loop control, computation, and optimization at the RTU level	34
2.4.8.4	Interface to application functions.....	34
2.4.8.5	Advanced data processing	34
2.4.8.6	Other functions	35
2.5	Intelligent electronic devices (IEDs)	35
2.5.1	Evolution of IEDs	35
2.5.2	IED functional block diagram	36
2.5.3	Hardware and software architecture of the IED	38
2.5.4	IED communication subsystem.....	38

2.5.5	IED advanced functionalities.....	40
2.5.5.1	Protection function including phasor estimation.....	40
2.5.5.2	Programmable logic and breaker control.....	42
2.5.5.3	Metering and power quality analysis.....	42
2.5.5.4	Self-monitoring and external circuit monitoring.....	44
2.5.5.5	Event reporting and fault diagnosis.....	44
2.5.6	Tools for settings, commissioning, and testing.....	45
2.5.7	Programmable LCD display.....	45
2.5.8	Typical IEDs.....	45
2.6	Data concentrators and merging units.....	46
2.6.1	RTUs, IEDs, and data concentrator.....	46
2.6.2	Merging units and IEDs.....	46
2.7	SCADA communication systems.....	46
2.8	Master station.....	46
2.8.1	Master station software components.....	47
2.8.1.1	Basic SCADA software.....	47
2.8.1.2	Advanced SCADA application functions.....	48
2.8.2	Master station hardware components.....	48
2.8.3	Server systems in the master station.....	48
2.8.3.1	SCADA server.....	49
2.8.3.2	Application server.....	49
2.8.3.3	ISR or HIM server.....	49
2.8.3.4	Development server.....	50
2.8.3.5	Network management server.....	50
2.8.3.6	Video projection system.....	50
2.8.3.7	CFE (communication front end) and FEP (front-end processor).....	50
2.8.3.8	ICCP server.....	50
2.8.3.9	Dispatcher training simulator (DTS) server.....	51
2.8.4	Small, medium, and large master stations.....	51
2.8.5	Global positioning systems (GPS).....	52
2.8.6	Master station performance.....	53
2.9	Human-machine interface (HMI).....	54
2.9.1	HMI components.....	54
2.9.1.1	Operator console.....	54
2.9.1.2	Operator dialogue.....	55
2.9.1.3	Mimic diagram.....	55
2.9.1.4	Peripheral devices.....	55
2.9.2	HMI software functionalities.....	55
2.9.3	Situational awareness.....	56
2.9.4	Intelligent alarm filtering: Need and technique.....	57

2.9.5	Alarm suppression techniques.....	58
2.9.5.1	Area of responsibility (AOR) alarm filtering	58
2.9.5.2	Alarm point priority filtering.....	59
2.9.5.3	Timed alarm suppression	59
2.9.5.4	Knowledge-based alarm suppression.....	60
2.9.6	Operator needs and requirements	61
2.10	Building the SCADA systems, legacy, hybrid, and new systems ...	62
2.11	Classification of SCADA systems	62
2.11.1	Single master–single remote	62
2.11.2	Single master–multiple RTU	63
2.11.3	Multiple master–multiple RTUs	63
2.11.4	Single master, multiple submaster, multiple remote	64
2.12	SCADA implementation: A laboratory model.....	65
2.12.1	The SCADA laboratory	65
2.12.2	System hardware	66
2.12.3	System software	67
2.12.4	SCADA lab field design	69
2.13	Case studies in SCADA	70
2.13.1	“Kentucky utility fires up its first SCADA system”	71
2.13.2	“Ketchikan Public Utilities finds solutions to outdated, proprietary RTUs”	71
2.13.3	“Overwhelmed by alarms: The blackout puts filtering and suppression technologies in the spotlight”	71
2.13.4	“North Carolina Municipal Power Agency boosts revenue by replacing SCADA”	71
2.14	Summary	72
	Bibliography.....	72
Chapter 3 SCADA communication		75
3.1	Introduction.....	75
3.2	SCADA communication requirements.....	76
3.3	Smart grid communication infrastructure	76
3.3.1	Quality of services (QoS).....	78
3.3.2	Interoperability	78
3.3.3	Scalability.....	78
3.3.4	Security	78
3.3.5	Standardization.....	79
3.4	SCADA communication topologies	79
3.4.1	Point to point and multi-drop.....	79
3.4.2	Bus topology	80
3.4.3	Ring topology	80
3.4.4	Star topology	81
3.4.5	Mesh topology.....	81
3.4.6	Data flow: Simplex and duplex.....	81

3.5	SCADA data communication techniques	81
3.5.1	Master-slave.....	81
3.5.2	Peer-to-peer	82
3.5.3	Multi-peer (broadcast and multicast)	82
3.6	Data communication.....	82
3.6.1	Components of a data communication system	83
3.6.2	Transmission of digital signals.....	83
3.6.2.1	Baseband communication	83
3.6.2.2	Broadband communication.....	84
3.6.3	Modes of digital data communication.....	84
3.6.3.1	Synchronous data transmission	84
3.6.3.2	Asynchronous data transmission.....	85
3.6.4	Error detection techniques.....	85
3.6.4.1	Parity check	86
3.6.4.2	Checksum error detection.....	86
3.6.4.3	Cyclic redundancy check (CRC).....	86
3.6.5	Media access control (MAC) techniques.....	87
3.6.5.1	Polling.....	87
3.6.5.2	Polling by exception	87
3.6.5.3	Token passing.....	88
3.6.5.4	Time division multiplex media access.....	88
3.6.5.5	Carrier sense multiple access with collision detection (CSMA/CD).....	88
3.7	SCADA communication protocol architecture	89
3.7.1	OSI seven-layer model	90
3.7.2	Enhanced performance architecture (EPA) model.....	96
3.7.3	TCP/IP model.....	98
3.8	Evolution of SCADA communication protocols.....	100
3.9	SCADA and smart grid protocols	101
3.9.1	Modbus	101
3.9.1.1	Modbus message frame	101
3.9.2	IEC 60870-5-101/103/104	102
3.9.2.1	Protocol architecture	103
3.9.2.2	IEC 60870 message structure.....	104
3.9.3	Distributed network protocol 3 (DNP3).....	106
3.9.3.1	DNP3 protocol structure.....	106
3.9.3.2	DNP3 message structure	106
3.9.4	Inter-control center protocol (ICCP).....	107
3.9.5	Ethernet.....	109
3.9.6	IEC 61850.....	110
3.9.7	IEEE C37.118: Synchrophasor standard	112
3.9.7.1	Measurement time tag from synchrophasor	113
3.9.7.2	Reporting rates.....	113
3.9.7.3	Message structure.....	113

3.9.8	Wireless technologies for home automation.....	115
3.9.8.1	ZigBee	115
3.9.8.2	ZigBee devices.....	115
3.9.8.3	Wi-Fi.....	116
3.9.9	Protocols in the power system: Deployed and evolving..	116
3.10	Media for SCADA and smart grid communication.....	118
3.11	Guided media.....	118
3.11.1	Twisted pair.....	118
3.11.2	Coaxial (coax) metallic cable	119
3.11.3	Optical fiber.....	120
3.11.4	Power line carrier communication (PLCC).....	121
3.11.4.1	Power line carrier (PLC).....	121
3.11.4.2	Distribution line carrier (DLC)	121
3.11.4.3	Broadband over power lines (BPL).....	122
3.11.5	Telephone-based systems	122
3.11.5.1	Telephone lines: Dial-up and leased	122
3.11.5.2	ISDN (integrated services digital network).....	123
3.11.5.3	Digital subscriber loop (DSL).....	123
3.12	Unguided (wireless) media	124
3.12.1	Satellite communication	124
3.12.2	Radio (VHF, UHF, spread spectrum).....	124
3.12.3	Microwaves.....	125
3.12.4	Cell phone.....	126
3.12.5	Paging.....	126
3.13	Communication media: Utility owned versus leased.....	127
3.14	Security for SCADA and smart grid communication	128
3.15	Challenges for SCADA and smart grid communication	130
3.16	Summary	131
	Bibliography.....	131
Chapter 4	Substation automation (SA).....	133
4.1	Substation automation: Why? Why now?	133
4.1.1	Deregulation and competition.....	133
4.1.2	Development of intelligent electronic devices (IEDs)	133
4.1.3	Enterprise-wide interest in information from IEDs	134
4.1.4	Implementation and acceptance of standards.....	134
4.1.5	Construction cost savings and reduction in physical complexity.....	134
4.2	Conventional substations: Islands of automation.....	134
4.3	New smart devices for substation automation.....	137
4.3.1	IEDs.....	137
4.3.2	New instrument transformers with digital interface.....	138
4.3.3	Intelligent breaker	139
4.3.4	Merging units (MUs).....	139
