CHAPTER	11	Biodiversity: Preserving Species 222	CHAPTER	24	Environmental Policy, Law, and Planning 538
CHAPTER	12	Biodiversity: Preserving Landscapes 246	CHAPTER	25	What Then Shall We Do? 560

Contents

About the Authors	iii
Preface	xiv
Guided Tour	xviii

Introduction: Learning to Learn	1
Learning Outcomes	1
Case Study: Why Study Environmental Science?	2
L.1 HOW CAN I GET AN A IN THIS CLASS?	3
Develop good study habits	3
Recognize and hone your learning styles	5
Use this textbook effectively	5
Will this be on the test?	6
L.2 THINKING ABOUT THINKING	7
Approaches to truth and knowledge	8
What Do You Think? How Do You Tell the News from the Noise?	9
What do I need to think critically?	10
Applying critical thinking	10
Some clues for unpacking an argument	10
Avoiding logical errors and fallacies	11
Using critical thinking in environmental science	11

1 Understanding Our Environment	12
Learning Outcomes	12
Case Study: Renewable Energy in China	13

1.1 WHAT IS ENVIRONMENTAL SCIENCE?	14
1.2 CURRENT CONDITIONS	15
We live on a marvelous planet	15
We face many serious environmental problems	15
There are also many signs of hope	17
What Do You Think? Calculating Your Ecological Footprint	19
1.3 A BRIEF HISTORY OF CONSERVATION AND ENVIRONMENTALISM	20
Nature protection has historic roots	20
Resource waste inspired pragmatic, utilitarian conservation	21
Ethical and aesthetic concerns inspired the preservation movement	21

Rising pollution levels led to the modern environmental movement	22
Environmental quality is tied to social progress	23
1.4 HUMAN DIMENSIONS OF ENVIRONMENTAL SCIENCE	24
We live in an inequitable world	24
Is there enough for everyone?	25
Recent progress is encouraging	26
1.5 SUSTAINABLE DEVELOPMENT	26
Can development be truly sustainable?	27
What is the role of international aid?	28
Indigenous people are important guardians of nature	28
1.6 ENVIRONMENTAL ETHICS	29
We can extend moral value to people and things	30
1.7 FAITH, CONSERVATION, AND JUSTICE	31
Many faiths support environmental conservation	31
Environmental justice combines civil rights and environmental protection	32
Environmental racism distributes hazards inequitably	33
Data Analysis: Working with Graphs	35

2 Principles of Science and Systems	37
Learning Outcomes	37
Case Study: Forest Responses to Global Warming	38

2.1 WHAT IS SCIENCE?	39
Science depends on skepticism and accuracy	39
Deductive and inductive reasoning are both useful	40
Testable hypotheses and theories are essential tools	40
Understanding probability helps reduce uncertainty	41
Statistics can indicate the probability that your results were random	41
Experimental design can reduce bias	41
Exploring Science: What Are Statistics, and Why Are They Important?	42
Models are an important experimental strategy	43
2.2 SYSTEMS DESCRIBE INTERACTIONS	44
Systems can be described in terms of their characteristics	45
Systems may exhibit stability	46
2.3 SCIENTIFIC CONSENSUS AND CONFLICT	47
Detecting pseudoscience relies on independent, critical thinking	47
Data Analysis: Evaluating Uncertainty	50

3 Matter, Energy, and Life 51

Learning Outcomes 51

Case Study: Chesapeake Bay: How Do We Improve on a C-? 52

3.1 ELEMENTS OF LIFE 53

Atoms, elements, and compounds 53

Chemical bonds hold molecules together 54

Exploring Science: A "Water Planet" 55

Ions react and bond to form compounds 55

Organic compounds have a carbon backbone 56

Cells are the fundamental units of life 57

3.2 ENERGY 58

Energy occurs in many forms 58

Thermodynamics regulates energy transfers 58

3.3 ENERGY FOR LIFE 59

Extremophiles gain energy without sunlight 59

Green plants get energy from the sun 60

Photosynthesis captures energy; respiration releases that energy 60

3.4 FROM SPECIES TO ECOSYSTEMS 61

Ecosystems include living and nonliving parts 62

Food webs link species of different trophic levels 62

Ecological pyramids describe trophic levels 63

3.5 MATERIAL CYCLES AND LIFE PROCESSES 65

The hydrologic cycle redistributes water 65

Carbon moves through the carbon cycle 67

Exploring Science: Remote Sensing, Photosynthesis, and Material Cycles 68

Nitrogen is not always biologically available 68

Phosphorus is an essential nutrient 70

Sulfur is both a nutrient and an acidic pollutant 70

Data Analysis: Inspect the Chesapeake's Report Card 73

4 Evolution, Biological Communities, and Species Interactions 74

Learning Outcomes 74

Case Study: Darwin's Voyage of Discovery 75

4.1 EVOLUTION PRODUCES SPECIES DIVERSITY 76

Natural selection leads to evolution 76

All species live within limits 76

The ecological niche is a species' role and environment 77

Speciation maintains species diversity 79

Evolution is still at work 80

Exploring Science: New Flu Vaccines 81

Taxonomy describes relationships among species 82

4.2 SPECIES INTERACTIONS SHAPE BIOLOGICAL COMMUNITIES 83

Competition leads to resource allocation 83

Predation affects species relationships 83

Some adaptations help avoid predation 84

Symbiosis involves intimate relations among species 85

Keystone species have disproportionate influence 86

4.3 COMMUNITY PROPERTIES AFFECT SPECIES AND POPULATIONS 87

Productivity is a measure of biological activity 87

What Can You Do? Working Locally for Ecological Diversity 87

Abundance and diversity measure the number and variety of organisms 88

Community structure describes spatial distribution of organisms 88

Complexity and connectedness are important ecological indicators 89

Resilience and stability make communities resistant to disturbance 89

Edges and boundaries are the interfaces between adjacent communities 90

What Do You Think? What's the Harm in Setting Unused Bait Free? 91

4.4 COMMUNITIES ARE DYNAMIC AND CHANGE OVER TIME 92

The nature of communities is debated 92

Ecological succession describes a history of community development 93

Appropriate disturbances can benefit communities 93

Introduced species can cause profound community change 94

Data Analysis: Species Competition 96

5 Biomes: Global Patterns of Life 98

Learning Outcomes 98

Case Study: Spreading Green Across Kenya 99

5.1 TERRESTRIAL BIOMES 100

Tropical moist forests have rain year-round 100

Tropical seasonal forests have yearly dry seasons 102

Tropical savannas, grasslands support few trees 103

Deserts are hot or cold, but all are dry 103

Temperate grasslands have rich soils 103

Temperate shrublands have summer drought 103

Temperate forests can be evergreen or deciduous 104

Boreal forests occur at high latitudes 105

Tundra can freeze in any month 105

5.2 MARINE ECOSYSTEMS 106

Open-ocean communities vary from surface to hadal zones 107

Coastal zones support rich, diverse communities 107

5.3 FRESHWATER ECOSYSTEMS 110

Lakes have open water 110

Wetlands are shallow and productive 111

5.4 HUMAN DISTURBANCE 112

Data Analysis: Reading Climate Graphs 115

6 Population Biology 116

Learning Outcomes 116

Case Study: Fishing to Extinction? 117

6.1 DYNAMICS OF POPULATION GROWTH	118
We can describe growth symbolically	118
Exponential growth describes continuous change	119
Exponential growth leads to crashes	119
Logistic growth slows with population increase	119
Species respond to limits differently: <i>r</i> - and <i>K</i> -selected species	120
6.2 COMPLICATING THE STORY: <i>r</i> = BIDE	121
What Do You Think? Too Many Deer?	122
6.3 FACTORS THAT REGULATE POPULATION GROWTH	123
Some population factors are density-independent; others are density-dependent	124
Density-dependent effects can be dramatic	125
6.4 CONSERVATION BIOLOGY	125
Island biogeography describes isolated populations	126
Conservation genetics helps predict survival of endangered species	126
Exploring Science: How Do You Count Tuna?	127
Population viability analysis calculates chances of survival	127
Data Analysis: Comparing Exponential to Logistic Population Growth	130
Data Analysis: Experimenting with Population Growth	130
7 Human Populations	131
Learning Outcomes	131
Case Study: Family Planning in Thailand: A Success Story	132
7.1 POPULATION GROWTH	133
Human populations grew slowly until relatively recently	133
7.2 PERSPECTIVES ON POPULATION GROWTH	134
Does environment or culture control human populations?	134
Technology can increase carrying capacity for humans	135
Population growth could bring benefits	136
7.3 MANY FACTORS DETERMINE POPULATION GROWTH	136
How many of us are there?	136
Fertility measures the number of children born to each woman	138
Mortality is the other half of the population equation	139
What Do You Think? China's One-Child Policy	140
Life span and life expectancy describe our potential longevity	140
Living longer has demographic implications	141
Emigration and immigration are important demographic factors	142
7.4 IDEAL FAMILY SIZE IS CULTURALLY AND ECONOMICALLY DEPENDENT	143
Many factors increase our desire for children	143
Other factors discourage reproduction	144
Could we have a birth dearth?	145
7.5 A DEMOGRAPHIC TRANSITION CAN LEAD TO STABLE POPULATION SIZE	145
Economic and social development influence birth and death rates	145
There are reasons to be optimistic about population	146
Many people remain pessimistic about population growth	146

Social justice is an important consideration 146
Women's rights affect fertility 147

7.6 FAMILY PLANNING GIVES US CHOICES	148
Fertility control has existed throughout history	148
Today there are many options	148
7.7 WHAT KIND OF FUTURE ARE WE CREATING?	149
Religion and politics complicate family planning	150
Data Analysis: Fun with Numbers	152

8 Environmental Health and Toxicology 153

Learning Outcomes 153

Case Study: How dangerous is BPA? 154

8.1 ENVIRONMENTAL HEALTH	155
The global disease burden is changing	155
Infectious and emergent diseases still kill millions of people	157
Conservation medicine connects ecology and health care	159
Resistance to drugs, antibiotics, and pesticides is increasing	160
Who should pay for health care?	161

8.2 TOXICOLOGY	161
How do toxins affect us?	161
What Can You Do? Tips for Staying Healthy	163
How does diet influence health?	164
8.3 MOVEMENT, DISTRIBUTION, AND FATE OF TOXINS	164
Solubility and mobility determine where and when chemicals move	164
Exposure and susceptibility determine how we respond	165
Bioaccumulation and biomagnification increase concentrations of chemicals	165
Persistence makes some materials a greater threat	166
Chemical interactions can increase toxicity	167

8.4 MECHANISMS FOR MINIMIZING TOXIC EFFECTS	167
Metabolic degradation and excretion eliminate toxins	167
Repair mechanisms mend damage	168

8.5 MEASURING TOXICITY	168
We usually test toxins on lab animals	168
There is a wide range of toxicity	169
Acute and chronic doses and effects differ	169
Detectable levels aren't always dangerous	170
Low doses can have variable effects	170

8.6 RISK ASSESSMENT AND ACCEPTANCE	170
Risk perception isn't always rational	170

Exploring Science: The Epigenome	171
Risk acceptance depends on many factors	172

8.7 ESTABLISHING HEALTH POLICY	173
Data Analysis: Graphing Multiple Variables	176

9 Food and Hunger 177

Learning Outcomes 177

Case Study: Becoming a Locavore in the Dining Hall 178

9.1 WORLD FOOD AND NUTRITION	179
Millions of people are still chronically hungry	179
Famines usually have political and social causes	180
Overeating is a growing world problem	181
High prices remain a widespread threat	182
We need the right kinds of food	182

9.2 KEY FOOD SOURCES	183
A few major crops supply most of our food	183
Rising meat production has costs and benefits	184
Seafood is a key protein source	185
Antibiotics are needed for intensive production	186

9.3 FOOD PRODUCTION POLICIES	186
-------------------------------------	-----

What Do You Think? Shade-Grown Coffee and Cocoa	187
Food policy is economic policy	187
Farm policies can also protect the land	188

9.4 THE GREEN REVOLUTION AND GENETIC ENGINEERING	188
Green revolution crops emphasize high yields	189
Genetic engineering moves DNA among species	189
Most GMOs have been engineered for pest resistance or weed control	190
Is genetic engineering safe?	191

Data Analysis: Using Relative Values	193
---	-----

10 Farming: Conventional and Sustainable Practices 195

Learning Outcomes	195
--------------------------	-----

Case Study Farming the Cerrado	196
---------------------------------------	-----

10.1 RESOURCES FOR AGRICULTURE	197
Soils are complex ecosystems	197
Healthy soil fauna can determine soil fertility	199
Your food comes mostly from the A horizon	200

10.2 WAYS WE USE AND ABUSE SOILS	200
Arable land is unevenly distributed	201
Soil losses reduce farm productivity	201
Wind and water move most soil	202
Deserts are spreading around the world	204

10.3 WATER AND NUTRIENTS	204
All plants need water to grow	204
Plants need nutrients, but not too much	204
Farming is energy-intensive	205

10.4 PESTS AND PESTICIDES	205
People have always used pest controls	206
Modern pesticides provide benefits but also create problems	206
There are many types of pesticides	207

What Can You Do? Organic Farming in the City	209
---	-----

10.5 ENVIRONMENTAL EFFECTS OF PESTICIDES	210
POPs accumulate in remote places	210
Pesticides cause a variety of health problems	211

10.6 ORGANIC AND SUSTAINABLE AGRICULTURE	212
What does "organic" mean?	212
Strategic management can reduce pests	213
Useful organisms can help us control pests	213
IPM uses a combination of techniques	214

What Can You Do? Controlling Pests	215
---	-----

10.7 SOIL CONSERVATION	215
Contours and ground cover reduce runoff	216
Reduced tillage leaves crop residue	216
Low-input agriculture aids farmers and their land	217

Exploring Science Ancient Terra Preta Shows How to Build Soils	218
Consumers' choices play an important role	219

Data Analysis: Mapping and Graphing Pesticide Use	221
--	-----

11 Biodiversity: Preserving Species 222

Learning Outcomes	222
--------------------------	-----

Case Study How Can We Save Spotted Owls?	223
---	-----

11.1 BIODIVERSITY AND THE SPECIES CONCEPT	224
What is biodiversity?	224
What are species?	224
Molecular techniques are revolutionizing taxonomy	224
How many species are there?	225
Hot spots have exceptionally high biodiversity	225

11.2 HOW DO WE BENEFIT FROM BIODIVERSITY?	227
All of our food comes from other organisms	227
Living organisms provide us with many useful drugs and medicines	227
Biodiversity provides ecological services	228
Biodiversity also brings us many aesthetic and cultural benefits	228

11.3 WHAT THREATENS BIODIVERSITY?	229
Extinction is a natural process	229
We are accelerating extinction rates	229
Invasive Species	230
Island ecosystems are particularly susceptible to invasive species	232

11.4 ENDANGERED SPECIES MANAGEMENT	235
Hunting and fishing laws have been effective	235
Legislation is key to biodiversity protection	235

What Can You Do? Don't Buy Endangered Species Products	236
---	-----

Recovery plans rebuild populations of endangered species	237
Private land is vital in endangered species protection	238

Exploring Science Bison Can Help Restore Prairie Ecosystems	239
Endangered species protection is controversial	239

What Can You Do? You Can Help Preserve Biodiversity	240
Large-scale, regional planning is needed	240
International wildlife treaties are important	241

11.5 CAPTIVE BREEDING AND SPECIES SURVIVAL PLANS	241
Zoos can help preserve wildlife	242
We need to save rare species in the wild	243

Data Analysis: Confidence Limits in the Breeding Bird Survey	244
---	-----

12 Biodiversity: Preserving Landscapes 246

Learning Outcomes 246

Case Study: Protecting Forests to Prevent Climate Change 247

12.1 WORLD FORESTS 248

Boreal and tropical forests are most abundant 248

Forests provide many valuable products 249

Tropical forests are especially threatened 250

Exploring Science: Using GIS to Protect Central African Forests 253

Temperate forests also are threatened 254

What Can You Do? Lowering Your Forest Impacts 256

Exploring Science: Saving the Great Bear Rainforest 257

12.2 GRASSLANDS 257

Grazing can be sustainable or damaging 258

Overgrazing threatens many U.S. rangelands 258

Ranchers are experimenting with new methods 259

12.3 PARKS AND PRESERVES 260

Many countries have created nature preserves 260

Not all preserves are preserved 262

Marine ecosystems need greater protection 264

Conservation and economic development can work together 264

Native people can play important roles in nature protection 264

What Can You Do? Being a Responsible Ecotourist 265

Species survival can depend on preserve size and shape 266

Data Analysis: Detecting Edge Effects 269

13 Restoration Ecology 270

Learning Outcomes 270

Case Study: Restoring Louisiana's Coastal Defenses 271

13.1 HELPING NATURE HEAL 272

Restoration projects range from modest to ambitious 272

Restoration ecologists tend to be idealistic but pragmatic 273

13.2 COMPONENTS OF RESTORATION 273

All restoration projects involve some common activities 273

13.3 ORIGINS OF RESTORATION 274

Sometimes we can simply let nature heal itself 275

Native species often need help to become reestablished 275

13.4 RESTORATION IS GOOD FOR HUMAN ECONOMIES AND CULTURES 277

Tree planting can improve our quality of life 278

Fire is often an important restoration tool 278

What Can You Do? Ecological Restoration in Your Own Neighborhood 279

13.5 RESTORING PRAIRIES 280

Fire is also crucial for prairie restoration 281

Huge areas of shortgrass prairie are being preserved 282

Bison help maintain prairies 284

13.6 RESTORING WETLANDS AND STREAMS 284

Restoring water supplies helps wetlands heal 285

Replumbing the Everglades is one of the costliest restoration efforts ever 286

Exploring Science: Measuring Restoration Success 287

Wetland mitigation is challenging 288

Constructed wetlands can filter water 289

Many streams need rebuilding 289

Severely degraded or polluted sites can be repaired or reconstructed 291

Data Analysis: Concept Maps 294

14 Geology and Earth Resources 295

Learning Outcomes 295

Case Study: Earthquake! 296

14.1 EARTH PROCESSES SHAPE OUR RESOURCES 297

Earth is a dynamic planet 297

Tectonic processes reshape continents and cause earthquakes 297

14.2 ROCKS AND MINERALS 299

The rock cycle creates and recycles rocks 300

Weathering and sedimentation wear down rocks 300

14.3 ECONOMIC GEOLOGY AND MINERALOGY 301

Metals are essential to our economy 302

Nonmetal minerals include gravel, clay, sand, and gemstones 302

Exploring Science: Rare Earth Minerals 303

14.4 ENVIRONMENTAL EFFECTS OF RESOURCE

EXTRACTION 304

Mining can have serious environmental impacts 304

What Do You Think? Should We Revise Mining Laws? 305

Processing ores also has negative effects 306

14.5 CONSERVING GEOLOGICAL RESOURCES 307

Recycling saves energy as well as materials 307

New materials can replace mined resources 308

14.6 GEOLOGICAL HAZARDS 308

Earthquakes are frequent and deadly hazards 308

Tsunamis can be more damaging than the earthquakes that trigger them 310

Volcanoes eject gas and ash, as well as lava 311

Landslides are examples of mass wasting 311

Floods are the greatest geological hazard 311

Beaches are vulnerable 313

Data Analysis: Mapping Geological Hazards 315

Data Analysis: Examining Tectonic Margins 316

15 Air, Weather, and Climate 317

Learning Outcomes 317

Case Study: When Wedges Do More Than Silver Bullets 318

15.1 WHAT IS THE ATMOSPHERE?	319
Absorbed solar energy warms our world	321
The greenhouse effect is energy capture by gases in the atmosphere	322
Evaporated water stores energy, and winds redistribute it	322
15.2 WEATHER HAS REGIONAL PATTERNS	323
Why does it rain?	323
The Coriolis effect explains why winds seem to curve	324
Ocean currents modify our weather	324
Much of humanity relies on seasonal rain	325
Frontal systems create local weather	326
Cyclonic storms can cause extensive damage	326
15.3 NATURAL CLIMATE VARIABILITY	327
Ice cores tell us about climate history	327
Earth's movement explains some cycles	328
El Niño is an ocean-atmosphere cycle	329
15.4 ANTHROPOGENIC CLIMATE CHANGE	330
The IPCC assesses data for policymakers	330
How does climate change work?	331
Positive feedbacks accelerate change	332
How do we know recent change is human-caused?	332
15.5 WHAT EFFECTS ARE WE SEEING?	333
Effects include warming, drying, and habitat change	334
Global warming will be costly; preventing it might not be	335
Sea-level change will eliminate many cities	337
Why are there disputes over climate evidence?	337
15.6 ENVISIONING SOLUTIONS	338
We can establish new rules and standards	338
Stabilization wedges could work now	338
What Do You Think? States Take the Lead on Climate Change	339
Alternative practices can be important	339
There are many regional initiatives	340
What Can You Do? Reducing Carbon Dioxide Emissions	341
Data Analysis: Examining the IPCC Fourth Assessment Report (AR4)	344

16 Air Pollution 345

Learning Outcomes 345

Case Study The Great London Smog 346

16.1 THE AIR AROUND US	347
There are many natural air pollutants	348
16.2 MAJOR TYPES OF POLLUTANTS	348
Criteria pollutants were addressed first	348
Mercury and other metals are also regulated	352
Carbon dioxide and halogens are key greenhouse gases	353
What Do You Think? Cap and Trade for Mercury Pollution?	354
Hazardous air pollutants (HAPs) can cause cancer and nerve damage	355
Aesthetic degradation also results from pollution	355
Indoor air can be worse than outdoor air	355

16.3 ATMOSPHERIC PROCESSES	356
Temperature inversions trap pollutants	356
Wind currents carry pollutants worldwide	357
Stratospheric ozone is destroyed by chlorine	358
The Montreal Protocol is a resounding success	359
16.4 EFFECTS OF AIR POLLUTION	360
Polluted air damages lungs	360
How does pollution make us sick?	360
Plants suffer cell damage and lost productivity	361
Acid deposition has many negative effects	362
Smog and haze reduce visibility	363
16.5 AIR POLLUTION CONTROL	364
Substances can be captured after combustion	364

What Can You Do? Saving Energy and Reducing Pollution 365

Fuel switching and fuel cleaning cut emissions	365
Clean air legislation remains controversial	365
Clean air legislation has been very successful	366

16.6 GLOBAL PROSPECTS	367
Rapid industrialization and urban growth outpace pollution controls	367
There are also signs of progress	368

Data Analysis: Graphing Air Pollution Control 371

17 Water Use and Management 372

Learning Outcomes 372

Case Study When Will Lake Mead Go Dry? 373

17.1 WATER RESOURCES	374
The hydrologic cycle constantly redistributes water	374
Water supplies are unevenly distributed	374
17.2 MAJOR WATER COMPARTMENTS	375
Oceans hold 97 percent of all water on earth	375
Glaciers, ice, and snow contain most surface fresh water	377
Groundwater stores large resources	377
Rivers, lakes, and wetlands cycle quickly	379
The atmosphere is among the smallest of compartments	379
17.3 WATER AVAILABILITY AND USE	379
Many countries suffer water scarcity and water stress	380
Water use is increasing	381
Agriculture is the greatest water consumer worldwide	381
Domestic and industrial water use is greatest in wealthy countries	383
17.4 FRESHWATER SHORTAGES	384
Many people lack access to clean water	384
Groundwater is being depleted	384
Diversion projects redistribute water	385
Dams often have severe environmental and social impacts	386
What Do You Think? China's South-Water-North Diversion	387
Sedimentation limits reservoir life	388
Climate change threatens water supplies	388
Exploring Science How Does Desalination Work?	389
Would you fight for water?	389
17.5 GETTING BY WITH LESS WATER	390

17.6 INCREASING WATER SUPPLIES 391

Domestic conservation can save water 391

Recycling can reduce consumption 392

Prices and policies have often discouraged conservation 392

What Can You Do? Saving Water and Preventing Pollution 393

Data Analysis: Graphing Global Water Stress and Scarcity 395

18 Water Pollution 396

Learning Outcomes 396

Case Study Protecting Our Nation's Water 397

18.1 WATER POLLUTION 398

Water pollution is anything that degrades water quality 398

18.2 TYPES AND EFFECTS OF WATER POLLUTANTS 399

Infectious agents remain an important threat to human health 399

Bacteria are detected by measuring oxygen levels 400

Nutrient enrichment leads to cultural eutrophication 400

Eutrophication can cause toxic tides and "dead zones" 401

Inorganic pollutants include metals, salts, acids, and bases 402

Exploring Science Studying the Dead Zone 403

Organic pollutants include drugs, pesticides, and other industrial substances 404

Sediment also degrades water quality 405

Thermal pollution is dangerous for organisms 406

18.3 WATER QUALITY TODAY 406

The Clean Water Act protects our water 406

The importance of a single word 407

Water quality problems remain 407

Other countries also have serious water pollution 408

Groundwater is hard to monitor and clean 409

There are few controls on ocean pollution 411

18.4 WATER POLLUTION CONTROL 412

Source reduction is often the cheapest and best way to reduce pollution 412

Controlling nonpoint sources requires land management 412

What Do You Think? Watershed Protection in the Catskills 413

Human waste disposal occurs naturally when concentrations are low 413

Water remediation may involve containment, extraction, or phytoremediation 416

18.5 WATER LEGISLATION 417

The Clean Water Act was ambitious, bipartisan, and largely successful 418

What Can You Do? Steps You Can Take to Improve Water Quality 418

Clean water reauthorization remains contentious 419

Other important legislation also protects water quality 419

Data Analysis: Examining Pollution Sources 421

19 Conventional Energy 422

Learning Outcomes 422

Case Study Gulf Oil Spill 423

19.1 ENERGY RESOURCES AND USES 424

How do we measure energy? 424

Fossil fuels supply most of the world's energy 424

How do we use energy? 425

19.2 COAL 426

Coal resources are vast 426

Coal mining is a dirty, dangerous business 426

Burning coal releases many pollutants 428

Clean coal technology could be helpful 428

19.3 OIL 429

Have we passed peak oil? 429

What Do You Think? Ultradeep Drilling 430

Like other fossil fuels, oil has negative impacts 431

Oil shales and tar sands contain huge amounts of petroleum 432

19.4 NATURAL GAS 433

Most of the world's known natural gas is in a few countries 433

New methane sources could be vast 433

What Do You Think? Coal-Bed Methane 434

Gas can be shipped to market 435

Other unconventional gas sources 435

19.5 NUCLEAR POWER 436

How do nuclear reactors work? 436

There are many different reactor designs 437

Some alternative reactor designs may be safer 438

Breeder reactors might extend the life of our nuclear fuel 439

19.6 RADIOACTIVE WASTE MANAGEMENT 439

We lack safe storage for radioactive wastes 440

Decommissioning old nuclear plants is expensive 441

19.7 CHANGING FORTUNES OF NUCLEAR POWER 441

Data Analysis: Comparing Energy Use and Standards of Living 444

20 Sustainable Energy 445

Learning Outcomes 445

Case Study Deserteck: A Partnership for Renewable Energy 446

20.1 RENEWABLE ENERGY 447

There are many ways to save energy 447

Green buildings can cut energy costs by half 448

Transportation could be far more efficient 449

20.2 SOLAR ENERGY 451

Solar collectors can be passive or active 451

What Can You Do? Some Things You Can Do to Save Energy 451

High-temperature solar energy 452

Public policy can promote renewable energy 454

Photovoltaic cells generate electricity directly 454

Smart metering can save money 456

20.3 FUEL CELLS	456
All fuel cells have similar components	456
20.4 BIOMASS ENERGY	457
We can burn biomass	457
Methane from biomass is clean and efficient	458
Ethanol and biodiesel can contribute to fuel supplies	459
Cellulosic ethanol may offer hope for the future	460
Could algae be a hope for the future?	462
20.5 HYDROPOWER	462
Falling water has been used as an energy source since ancient times	462
Exploring Science: Can Biofuels Be Sustainable?	463
20.6 WIND	464
Wind could meet all our energy needs	465
We need a supergrid	466
20.7 OTHER ENERGY SOURCES	467
Tides and waves contain significant energy	468
Ocean thermal electric conversion might be useful	468
20.8 WHAT'S OUR ENERGY FUTURE?	469
Data Analysis: Energy Calculations	471

21 Solid, Toxic, and Hazardous Waste 472

Learning Outcomes 472

Case Study: Plastic Seas 473

21.1 SOLID WASTE	474
The waste stream is everything we throw away	474
21.2 WASTE DISPOSAL METHODS	475
Open dumps release hazardous materials into air and water	475
Ocean dumping is nearly uncontrollable	476
We often export waste to countries ill-equipped to handle it	476
Landfills receive most of our waste	477
Incineration produces energy but causes pollution	478
21.3 SHRINKING THE WASTE STREAM	479
Recycling captures resources from garbage	479
Recycling saves money, materials, and energy	480

What Do You Think? Environmental Justice 481

Recycling plastic is especially difficult	482
Commercial-scale recycling and composting are areas of innovation	483
Demufacturing is necessary for appliances and e-waste	483
Reuse is even more efficient than recycling	484
Reducing waste is often the cheapest option	484

What Can You Do? Reducing Waste 485

21.4 HAZARDOUS AND TOXIC WASTES	485
Hazardous waste must be recycled, contained, or detoxified	485
Superfund sites are those listed for federal cleanup	487
Brownfields present both liability and opportunity	488
Hazardous waste storage must be safe	488

Exploring Science: Phytoremediation: Cleaning Up Toxic Waste with Plants 489

What Can You Do? Alternatives to Hazardous Household Chemicals 491

Data Analysis: How Much Do You Know About Recycling 493

22 Urbanization and Sustainable Cities 494

Learning Outcomes 494

Case Study: Vauban: A Car-free Suburb 495

22.1 URBANIZATION	496
Cities have specialized functions as well as large populations	497
Large cities are expanding rapidly	498
22.2 WHY DO CITIES GROW?	499
Immigration is driven by push and pull factors	499
Government policies can drive urban growth	499
22.3 URBAN CHALLENGES IN THE DEVELOPING WORLD	500
Traffic congestion and air quality are growing problems	500
Insufficient sewage treatment causes water pollution	501
Many cities lack adequate housing	501
22.4 URBAN CHALLENGES IN THE DEVELOPED WORLD	502
What Do You Think? People for Community Recovery	503
Urban sprawl consumes land and resources	504
Transportation is crucial in city development	505
Mass transit could make our cities more livable	506
22.5 SMART GROWTH	507
Garden cities and new towns were early examples of smart growth	507
New urbanism advanced the ideas of smart growth	508
Green urbanism promotes sustainable cities	509
What Do You Think? The Architecture of Hope	510
Open space design preserves landscapes	511
Data Analysis: Using a Logarithmic Scale	513

23 Ecological Economics 514

Learning Outcomes 514

Case Study: Loans That Change Lives 515

23.1 PERSPECTIVES ON THE ECONOMY	516
Can development be sustainable?	516
Resources can be renewable or nonrenewable	516
Classical economics examines supply and demand	518
Neoclassical economics emphasizes growth	519
23.2 ECOLOGICAL ECONOMICS	519
Ecological economics assigns cost to ecosystems	520
Ecosystem services include provisioning, regulating, and aesthetic values	521
23.3 POPULATION, TECHNOLOGY, AND SCARCITY	522
Communal property resources are a classic problem in ecological economics	522
Scarcity can lead to innovation	523

Carrying capacity is not necessarily fixed	524
Economic models compare growth scenarios	525
23.4 MEASURING GROWTH	525
GNP is our dominant growth measure	525
Alternate measures account for well-being	526
Cost-benefit analysis aims to optimize benefits	526
23.5 MARKET MECHANISMS CAN REDUCE POLLUTION	528
Using market forces	528
Is emissions trading the answer?	528
Sulfur trading offers a good model	529
Carbon trading is already in work	529
23.6 TRADE, DEVELOPMENT, AND JOBS	530
International trade brings benefits but also intensifies inequities	530
Microlending helps the poorest of the poor	530
23.7 GREEN BUSINESS	531
New business models follow concepts of ecology	531
What Do You Think? Eco-Efficient Business Practices	532
Efficiency starts with product design	533
Green consumerism gives the public a voice	534
Environmental protection creates jobs	534
What Can You Do? Personally Responsible Economy	534
Data Analysis: Evaluating Human Development	537

24 Environmental Policy, Law, and Planning 538

Learning Outcomes 538

Case Study Can Policy Protect Elephants? 539

24.1 BASIC CONCEPTS IN POLICY	540
Basic principles guide environmental policy	541
Corporate money influences policy	541
Public awareness and action shape policy	542
24.2 MAJOR ENVIRONMENTAL LAWS	542
NEPA (1969) establishes public oversight	544
The Clean Air Act (1970) regulates air emissions	544
The Clean Water Act (1972) protects surface water	545
The Endangered Species Act (1973) protects wildlife	545
The Superfund Act (1980) lists hazardous sites	546
24.3 HOW ARE POLICIES MADE?	546
Congress and legislatures vote on statutory laws	547
Judges decide case law	548
Executive agencies make rules and enforce laws	550
How much government do we want?	552

24.4 INTERNATIONAL CONVENTIONS	552
Major International Agreements	553
Enforcement often depends on national pride	554
24.5 NEW APPROACHES TO POLICY	555
Community-based planning uses local knowledge	555
Green plans outline goals for sustainability	556
Bolivia's Law of Mother Earth	557

Data Analysis: Examine Your Environmental Laws 559

25 What Then Shall We Do? 560

Learning Outcomes 560

Case Study 350.org: Making a Change 561

25.1 MAKING A DIFFERENCE	562
25.2 ENVIRONMENTAL EDUCATION	562
Environmental literacy means understanding our environment	562
Citizen science encourages everyone to participate	563
Environmental careers range from engineering to education	564
Green business and technology are growing fast	564
Exploring Science: Citizen Science and the Christmas Bird Count	565

25.3 WHAT CAN INDIVIDUALS DO?	566
How much is enough?	566
We can choose to reduce our environmental impacts	567
"Green washing" can mislead consumers	567

What Can You Do? Reducing Your Impact	567
Certification identifies low-impact products	568
Green consumerism has limits	568

25.4 HOW CAN WE WORK TOGETHER?	569
National organizations are influential but sometimes complacent	569
New players bring energy to environmental policy	570
International nongovernmental organizations mobilize many people	571

25.5 CAMPUS GREENING	572
Electronic communication is changing the world	572
Schools can be environmental leaders	572
Your campus can reduce energy consumption	574

25.6 SUSTAINABILITY IS A GLOBAL CHALLENGE	574
Data Analysis: Campus Environmental Audit	578
