Contents

Preface		ix
Chapter I	Lamination of Nanofiber Web into Nanostructured Fabric <i>A. K. Haghi</i>	1
Chapter II	Carbon Nanotube/Chitosan Nanocomposite <i>Z. Moridi, V. Mottaghitalab and A. K. Haghi</i>	11
Chapter III	Electrospun Biodegradable Nanofibers <i>A. K. Haghi</i>	33
Chapter IV	Drug Delivery Systems Based on Chitosan Nanoparticles <i>M. R. Saboktakin</i>	49
Chapter V	Application of Nano-SiO ₂ in Cementitious Composites <i>A. K. Haghi</i>	59
Chapter VI	Free Vibration Analysis of Double-Walled Carbon Nanotubes <i>R. Ansari, R. Rajabiehfar and B. Arash</i>	69
Chapter VII	Local Delivery Systems Based on Biodegradable Chitosan Beads <i>M. R. Saboktakin</i>	85
Chapter VIII	Molecular Dynamics Simulation in Modeling Carbon Nanotubes <i>R. Ansari and B. Motevalli</i>	95
Chapter IX	Conductive Nanofiber <i>Z. M. Mahdih, V. Mottaghitalab, N. Piri and A. K. Haghi</i>	115
Chapter X	Achievements in Production of PAN Monofilament in Nanoscale <i>M. Sadrjahani, S. A. Hoseini, V. Mottaghitalab and A. K. Haghi</i>	129
Chapter XI	Supreme EMI Shielding Using Electroless Plating of Metallic Nanoparticle on Cotton Fabric <i>A. Afzali, V. Mottaghitalab and M. Saberi</i>	145
Chapter XII	A Note on Electrochemical Synthesis of Cobalt Nanoparticles <i>A. F. Dresvyannikov, M. E. Kolpakov, E. V. Pronina and M. V. Dudnik</i>	155

Chapter XIII	Practical Hints on Energy-Saving Technology for Production of Nanosized Particles <i>A. M. Lipanov and V. A. Denisov</i>	165
Chapter XIV	Prediction of Polymer Composites Strength Properties <i>Yu. G. Bogdanova, V. D. Dolzhikova, I. M. Karzov, A. Yu. Alentiev and A. V. Shapagin</i>	177
Chapter XV	Priority Areas of Nanotechnologies Implementation: Hydroponic Crop Production <i>Yu. B. Chetyrkin, E. M. Basarygina and P. M. Trushin</i>	187
Chapter XVI	The Effect of Chemical Modification of Polymeric Films on the Structural-Power Characteristics of Their Surfaces <i>Anna K. D'yakova, Sergey A. Trifonov, Eugene A. Sosnov and Anatoly A. Malygin</i>	195
Chapter XVII	Nanoparticle Finishes Influence on Color Matching of Cotton Fabrics <i>G. Rosace, V. Migani, C. Colleoni, M. R. Massafra and E. Sancaktaroglu</i>	205
Chapter XVIII	Novel Class of Eco-Flame Retardants Based on the Renewable Raw Materials <i>A. M. Sakharov, P. A. Sakharov, S. M. Lomakin and G. E. Zaikov</i>	223
Chapter XIX	Combustion and Thermal Degradation of Polypropylene in the Presence of Multiwalled Carbon Nanotube Composites <i>G. E. Zaikov, S. M. Lomakin, N. G. Shilkina and R. Kozlowski</i>	235
Chapter XX	Theoretical Structural Model of Nanocomposites Polymer/Organoclay Reinforcement <i>Georgiy V. Kozlov, Boris Zh. Dzhangurazov, Stefan Kubica, Gennady E. Zaikov and Abdulakh K. Mikitaev</i>	251
Chapter XXI	Theoretical Estimation Acid Force of Fluorine-Containing Pyrimidines <i>V. A. Babkin, D. S. Andreev, E. S. Titova, I. Yu. Kameneva, A. I. Rakhimov, S. Kubica and G. E. Zaikov</i>	261
Chapter XXII	On Principles of the Addition of Interactions Energy Characteristics <i>G. A. Korablev, V. I. Kodolov and G. E. Zaikov</i>	283
Chapter XXIII	Exchange Spatial-Energy Interactions <i>G. A. Korablev and G. E. Zaikov</i>	297
Chapter XXIV	A Nanofiller Particles Aggregation in Elastomeric Nanocomposites: The Irreversible Aggregation Model <i>Yu. G. Yanovskii, G. V. Kozlov, S. Kubica and G. E. Zaikov</i>	317
Chapter XXV	Calculations of Bond Energy in Cluster Aqueous Nanostructures <i>G. A. Korablev, N. V. Khokhriakov and G. E. Zaikov</i>	325

Chapter XXVI	The Fractal Physics of Branched Polymers Synthesis: Polyhydroxyether	331
	<i>G. V. Kozlov, D. A. Beeva, G. E. Zaikov, A. K. Mikitaev and S. Kubica</i>	
Chapter XXVII	The Experimental Estimation of Nanofiller “Chains” Structure in Elastomeric Nanocomposites	361
	<i>G. V. Kozlov, Yu. G. Yanovskii, S. Kubica and G. E. Zaikov</i>	
I	Index	371

Preface

The collection of topics in this book aims to reflect the diversity of recent advances in nanomaterials, nanochemistry and smart materials with a broad perspective that may be useful for scientists as well as for graduate students and engineers. The book offers scope for academics, researchers, and engineering professionals to present their research and development works that have potential for applications in several disciplines of engineering and science. Contributions range from new methods to novel applications of existing methods to gain understanding of the material and/or structural behavior of new and advanced systems. This book presents leading-edge research from around the world in these dynamic fields.

Chapter I - Clothing is a person's second skin, since it covers great parts of the body and has a large surface area in contact with the environment. Therefore, clothing is proper interface between environment and human body and could act as an ideal tool to enhance personal protection. Over the years, growing concern regarding health and safety of persons in various sectors, such as industries, hospitals, research institutions, battlefields and other hazardous conditions, has led to intensive research and development in field of personal protective clothing. Nowadays, there are different types of protective clothing. The simplest and most preliminary of this equipment is made from rubber or plastic that is completely impervious to hazardous substances, air and water vapor. Another approach to protective clothing is laminating activated carbon into multilayer fabric in order to absorb toxic vapors from environment and prevent penetration to the skin. The use of activated carbon is considered only a short-term solution because it loses its effectiveness upon exposure to sweat and moisture. The use of semi-permeable membranes as a constituent of the protective material is another approach. In this way, reactive chemical decontaminants encapsulates in microparticles or fills in microporous hollow fibers. The microparticle or fiber walls are permeable to toxic vapors but impermeable to decontaminants, so that the toxic agents diffuse selectively into them and neutralize. All of these equipments could trap such toxic pollutions but usually are impervious to air and water vapor and thus retain body heat. In other words, a negative relationship always exists between thermal comfort and protection performance for currently available protective clothing. For example, nonwoven fabrics with high air permeability exhibit low barrier performance, whereas microporous materials, laminated fabrics and tightly constructed wovens offer higher level of protection but lower air permeability. Thus there still exists a very real demand for improved protective clothing that can offer acceptable levels of impermeability to highly toxic pollutions of low molecular.
