

ELECTRICAL ENGINEERING MATERIALS

R K Shukla
Archana Singh

Electrical Engineering Materials

About the Authors

R K Shukla is Associate Professor in the Physics Department at Harcourt Butler Technological Institute, Kanpur; a premier and autonomous institute affiliated to Gautam Buddha Technical University, Lucknow. He has nearly 19 years of teaching experience at both the undergraduate and postgraduate levels. During this period he has taught many courses like Engineering Physics, Materials Science, Engineering Materials, Solid State Physics, Electronics, etc.

Dr Shukla is actively engaged in research work, has published more than 40 research papers in international journals, and has presented 35 papers in national and international conferences. His area of research is Condensed Matter Physics. He has guided many a PhD students in their theses work and has been on the review panel of PhD theses of many universities. He is a member of the Board of Studies at Bundelkhand University, Jhansi, and has worked in various research projects of UGC and CSIR. He is also a reviewer of reputed journals like *Philosophical Magazine*.

Archana Singh is Assistant Professor in the Electrical Engineering Department at Harcourt Butler Technological Institute, Kanpur. She has completed more than seven years in teaching and has been teaching subjects like Electrical Engineering, Basic System Analysis, Network Analysis and Synthesis, and Electrical and Electronics Engineering Materials. She completed her BE in Electrical Engineering from Motilal Nehru National Institute of Technology, Allahabad. She has worked for more than 2 years

in Tata Technologies Limited, a software company, in Pimpri, Pune. She also has experience in designing, development and customizing of various Oracle application modules.

Professor Singh has published several papers in journals of international repute (papers in ISRTE, ICPS-09 and NCERU-09) and various conferences. She is a member of Department of Purchase Committee, Proctorial Board, at the institute level. She is also a life member of the Indian Society for Technical Education (ISTE) and Institution of Engineers (IE). Professor Singh is currently pursuing PhD.

Preface

xvii

1. Crystal Structure, Bonding and Defects in Solids

1.1

- .1 Introduction 1.1
- .2 Space Lattice 1.2
- .3 Primitive Cell 1.3
- .4 Basic Crystal Structures and their Characteristics 1.3
- .5 Bravais Space Lattice 1.4
- .6 Numbers of Atoms Per Unit Cell 1.4
- .7 Co-ordination Number 1.5
- .8 Atomic Radii 1.6
- .9 Ionic Radii 1.6
- 110 Calculation of Lattice Constant 1.7
- 111 Lattice Planes and Miller Indices 1.9
- 112 Atomic Packing Factor: Packing Efficiency 1.11
- 113 Interplanar Spacing (d_{hkl}) 1.14
- 114 Spacing between Lattice Planes 1.15
- 115 X-ray Diffraction and Bragg's Law 1.17
- 116 Bragg's X-ray Spectrometer 1.19
- 117 Determining the Crystal Structure using Bragg's Law 1.20
- 118 Bonding in Solids 1.22
- 119 Primary Bonds 1.23
- 120 Secondary Bonds 1.26
- 121 Mixed Bonding 1.27
- 122 Defects in Crystals 1.27
- 123 Electronic Imperfections 1.27
- 124 Atomic Imperfections 1.28
- 125 Recent Advancement in Materials 1.28
- 126 Difference between Bulk, Fibre and Whisker forms of Material 1.29
- 127 Effects of Size of Whiskers on Mechanical Properties of Materials 1.29
- 128 Effects of Temperature on Properties of Whiskers 1.30
- 129 Volume Defects 1.30
- 130 Colour Centres 1.30
- 131 Methods to Produce Colour Centres 1.30
- 132 Kinds of Colour Centres 1.31
- Summary 1.31
- Exercises 1.32
- Numerical Problems 1.34
- Self-quiz Questions 1.35
- Objective-type Questions 1.36
- Reading List 1.39

2. Band Theory of Solids**2.1**

- 2.1 Introduction to Free-Electron Theory 2.1
- 2.2 Kronig–Penney Model 2.2
- 2.3 Explanation for Discontinuities in E vs. K curve (Concept of Brillouin Zones) 2.6
- 2.4 Formation of Solid Material 2.8
- 2.5 Formation of Band in Metals 2.9
- 2.6 Formation of Bands in Semiconductors and Insulating Materials 2.11
- 2.7 Classification of Materials on the Basis of Band Structure 2.12
- 2.8 Explanation for Difference in the Electrical Properties of Different Materials 2.14
- 2.9 Important Characteristic of a Band Electron 2.15
- 2.10 Number of Energy States per Band 2.15
- 2.11 Explanation for Insulating and Metallic Behaviour of Materials 2.16
- 2.12 Concept of Hole: A Remarkable Contribution of Band Theory 2.17
 - Summary 2.19
 - Exercises 2.20
 - Numerical Problems 2.21
 - Self-quiz Questions 2.21
 - Objective-type Questions 2.21
 - Reading List 2.23

3. Magnetic Properties of Materials**3.1**

- 3.1 Introduction 3.1
- 3.2 Origin of Magnetism—Microscopic Point of View 3.2
- 3.3 Basic Terms in Magnetism 3.3
- 3.4 Relation between Magnetic Permeability and Susceptibility 3.7
- 3.5 Classification of Magnetic Materials 3.10
- 3.6 Characteristics of Diamagnetic Materials 3.10
- 3.7 Characteristics of Paramagnetic Material 3.11
- 3.8 Characteristics of Ferromagnetic Materials 3.12
- 3.9 Characteristics of Antiferromagnetic Materials 3.12
- 3.10 Characteristics of Ferrimagnetic Materials 3.13
- 3.11 Langevin's Theory of Diamagnetism 3.13
- 3.12 Explanation of Dia, Para and Ferromagnetism 3.15
- 3.13 Demagnetisation 3.18
- 3.14 Ampère's Law in the Presence of Magnetic Material: (\vec{H} , \vec{B} and \vec{M} Vector) 3.18
- 3.15 Hysteresis and Hysteresis Loss 3.21
- 3.16 Langevin's Theory of Paramagnetism 3.22
- 3.17 Modification in the Langevin's Theory (Curie–Weiss Law) 3.24
- 3.18 Anti-Ferromagnetism and Néel Temperature 3.25
- 3.19 Ferrimagnetic Materials 3.26
- 3.20 Properties of some Important Magnetic Materials 3.27
- 3.21 Magnetostriction and Magnetostrictive Materials 3.29

- 3.22 Hard and Soft Ferromagnetic Materials and their Applications 3.29
- 3.23 Ferrimagnetic Materials or Ferrites 3.30
- 3.24 Applications of Hysteresis Curve 3.32
- 3.25 Magneto Materials for Electrical Machines 3.33
- 3.26 Losses in Transformers: Iron Loss and Core Loss 3.34
- 3.27 Soft Iron Silicon-Iron Alloy—Core Material for Transformer and Rotating Machines 3.35
- 3.28 Material for Aircraft Generators 3.35
- 3.29 Grain Orientation 3.36
- 3.30 Non-Oriented and Grain Oriented Steels 3.36
- 3.31 Hardened Steel 3.36
 - Summary 3.37
 - Exercises 3.37
 - Numerical Problems 3.38
 - Self-quiz Questions 3.39
 - Objective-type Questions 3.39
 - Reading List 3.43

4. Behaviour of Dielectric Materials in ac and dc Fields 4.1

- 4.1 Introduction 4.1
- 4.2 Classification of Dielectric Materials at Microscopic Level 4.2
- 4.3 Polar Dielectric Materials 4.3
- 4.4 Non-polar Dielectric Materials 4.3
- 4.5 Kinds of Polarisation 4.4
- 4.6 Behaviour of Dielectric Materials 4.5
- 4.7 Three Electric Vectors 4.12
- 4.8 Gauss's Law in a Dielectric 4.14
- 4.9 Electric Susceptibility and Static Dielectric Constant, χ_e and ϵ_r 4.16
- 4.10 Effect of Dielectric Medium upon Capacitance 4.18
- 4.11 Macroscopic Electric Field 4.19
- 4.12 Microscopic Electric Field 4.20
- 4.13 Internal (Local) Fields in Liquids and Solids—One-Dimensional Case 4.20
- 4.14 Temperature Dependence of Dielectric Constant 4.22
- 4.15 Response (Behaviour) of a Dielectric to an Alternating (Time-Varying) Field 4.22
- 4.16 Electronic Polarisability in Alternating Field 4.23
- 4.17 Ionic Polarisation in a Time-Varying Electric Field 4.26
- 4.18 Clausius–Mossotti Equation for ac Field (Non-Polar Dielectric) 4.26
- 4.19 Polar Dielectric in ac and dc Fields 4.27
- 4.20 Behaviour of Polar Dielectric at High Frequencies 4.29
- 4.21 Dielectric Loss 4.29
- 4.22 Dielectric Strength and Dielectric Breakdown 4.30
- 4.23 Various Kinds of Dielectric Materials 4.31
- 4.24 Hysteresis in Ferroelectric Materials 4.31

4.25	Applications of Ferroelectric Materials in Devices	4.32
4.26	Loss Factor and its Significance	4.32
4.27	Electrostriction Effect and Electrostrictive Materials	4.33
4.28	Direct Piezoelectric Effect and Inverse Piezoelectric Effect	4.33
4.29	Pyroelectric Materials	4.33
4.30	Difference between Ferroelectricity and Piezoelectricity	4.34
	<i>Summary</i>	3.34
	<i>Exercises</i>	3.35
	<i>Numerical Problems</i>	3.36
	<i>Self-quiz Questions</i>	3.37
	<i>Objective-type Questions</i>	3.37
	<i>Reading List</i>	4.39

5. Conductivity of Metals and Superconductivity

5.1

5.1	Introduction	5.1
5.2	Ohm's Law	5.3
5.3	Explanation for the Dependence of Electrical Resistivity upon Temperature	5.9
5.4	Free Electron Theory of Metals—Review of Metallic Conduction	5.9
5.5	Application of Lorentz–Drude Free Electron Theory	5.10
5.6	Effect of Various Parameters on Electrical Conductivity	5.11
5.7	Resistivity Ratio	5.12
5.8	Variation of Resistivity (Conductivity) of Alloys with Temperature	5.12
5.9	Thermal Conductivity of Metals K_T	5.13
5.10	Wiedemann–Franz Law	5.14
5.11	Lorentz Number (L)	5.15
5.12	Success and Failure of Classical Free Electron Theory	5.15
5.13	Calculation of Specific Heat of Metals	5.16
5.14	Quantum Mechanical Model Sommerfeld Idea	5.16
5.15	Energy Level and Density of States for Free Electron Gas	5.17
5.16	Behaviour of Fermi Function at Absolute Zero	5.18
5.17	Explanation for Low Specific Heat of Metals	5.23
5.18	Average KE of Electrons	5.24
5.19	Constancy of Work Function Over a Wide Range of Temperature	5.26
5.20	Success of Quantum Free Electron Theory	5.26
5.21	Heat Produced in Current-Carrying Conductor	5.26
5.22	Thermoelectric Effect	5.27
5.23	Thermoelectric Series	5.28
5.24	Seebeck's Experiment	5.28
5.25	Neutral Temperature	5.29
5.26	Thermoelectric Power	5.29
5.27	Reason for Thermoelectric Effect	5.30
5.28	Law of Intermediate Metal	5.30
5.29	Law of Intermediate Temperatures	5.31

5.30	Applications of Thermoelectric Effect	5.32
5.31	Peltier Effect	5.32
5.32	Reason For Heating and Cooling in Peltier Effect	5.32
5.33	Peltier Coefficient	5.33
5.34	Thomson Effect	5.33
5.35	Reason for Thomson EMF	5.34
5.36	Thermodynamics of Peltier Effect	5.34
5.37	Positive and Negative Thomson Effect	5.35
5.38	Thomson Coefficient	5.37
5.39	Practical Applications of Heating Effect	5.38
5.40	Discovery of Superconductivity	5.38
5.41	Superconductivity and Transition Temperature	5.38
5.42	Superconducting Materials	5.39
5.43	Explanation of Superconducting Phenomenon	5.40
5.44	Isotope Effect	5.41
5.45	Effect of Magnetic Field (Critical Magnetic Field)	5.42
5.46	Critical Currents	5.45
5.47	The Meissner Effect	5.46
5.48	Experimental Demonstration of Meissner Effect	5.47
5.49	Classification of Superconductors	5.48
5.50	Electrodynamics of Superconductors (Explanation of Meissner Effect)	5.50
5.51	London's Penetration Depth	5.51
5.52	Temperature Dependence of Superconducting Electrons	5.53
5.53	BCS Theory of Superconductors	5.53
5.54	Formation and Characteristics of Cooper Pairs	5.54
5.55	Experimental Evidence for the Energy Gap	5.54
5.56	Flux Quantisation	5.55
5.57	Josephson Effect	5.55
5.58	Characteristics of Superconductors	5.56
5.59	Change in Thermodynamic Parameters in Superconducting State	5.57
5.60	Frequency Dependence of Superconductivity	5.59
5.61	Current Status of High Temperature Superconductors	5.60
5.62	Practical Applications of Superconductors	5.60
	<i>Summary</i>	5.62
	<i>Exercises</i>	5.63
	<i>Numerical Problems</i>	5.65
	<i>Self-quiz Questions</i>	5.66
	<i>Objective-type Questions</i>	5.66
	<i>Reading List</i>	5.71

6. Electrical Conducting and Insulating Materials

6.1

6.1	Introduction: Properties and Applications	6.1
6.2	Classification of Conducting Materials	6.2
6.3	Difference in Properties of Hard-Drawn and Annealed Copper	6.4
6.4	Stranded Conductors	6.6
